

# Home — your day, already decided.

**What it does:** answers "who should I talk to today?" the moment you open it, before your coffee is ready.

## Reach out queue

People past due, top picks at your priority firms, and one rotating discovery pick. Every row says why now.

## Today panel

Your calendar and weather, next to the day's outreach.

## Fund & company news

Updates from the companies you cover, filtered by type.

## Log · Snooze

Log a touch in ten seconds or push someone to next week. The queue refills on its own.

## To-dos

Today, this week, this month. Work and personal, each linkable to a person.

## Next steps

Every follow-up from a logged touch, oldest first, with one-tap done.

# Companies — your coverage universe, watching itself.

**What it does:** the companies you cover, with updates pulled from public sources, so you hear about a raise before anyone emails you about it.

Demo mode — showing sample data. Fill supabase-config.js to connect your database.

## Updates

SEC filings, hiring, news, DNS changes, an investors page going live. Pulled straight from public sources.

## People you know here

Matched against your Network, so a company shows who you already know inside.

## Reach out + why now

A flag when something changes, with a plain sentence for why: "New CFO announced 12 days ago."

## Add companies

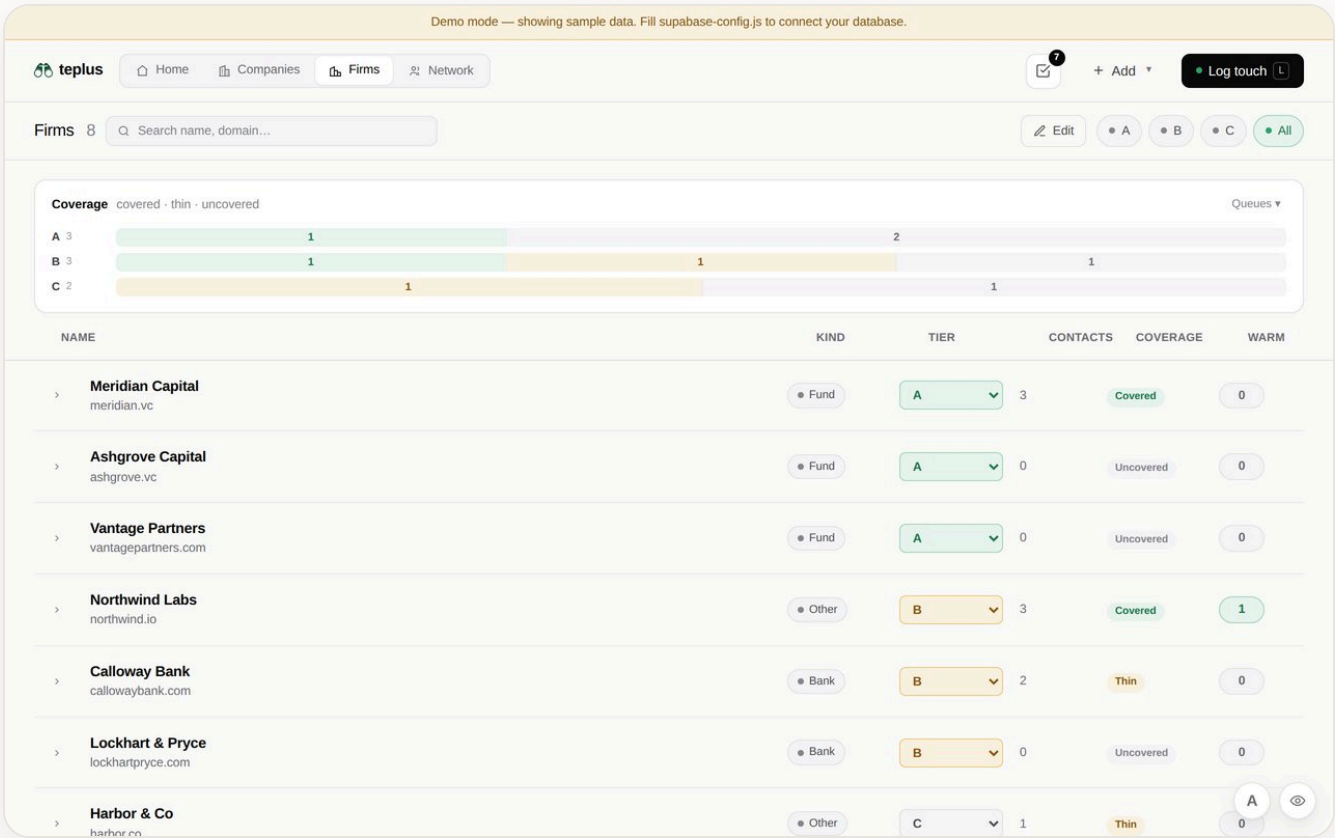

Paste a list, or ask your AI to build one from a sector and stage. Both load straight in.

### FREE PLAN LIMITS

Coverage runs inside your own database, in small batches every 15 minutes. A few hundred companies is the practical ceiling on the free tier.

# Firms — rank the firms, see the gaps.

**What it does:** every firm you care about, ranked A/B/C, with an honest bar showing where you have real relationships versus just a name.

## A / B / C ranks

Your call on how much each firm matters. Feeds the picks on Home and the marker in Network.

## Coverage bar

Covered, thin, or uncovered. The gap between rank and coverage is your to-do list.

## Queues

High-rank firms that are thin or uncovered, surfaced as a list to chip away at.

## Bulk edit

Select rows and set ranks in batches, or accept suggested ranks one by one.

# Network — everyone who matters, sorted by warmth.

**What it does:** your people, each with a warmth score that decays on its own, so cold relationships surface without you having to remember.

Demo mode — showing sample data. Fill supabase-config.js to connect your database.

A

## Warmth

100 right after a touch, decaying to 0 at that person's cadence. Not a judgment, a clock.

## Groups & filters

By firm or flat, by category, "A-list firms only," instant search, and a Cmd+K palette.

## Log touch

Channel, direction, a one-line summary, an optional next step. The ten-second habit the system runs on.

## Importance

Key, standard, or annual. Sets the cadence and the ordering everywhere else.

## Person detail

Full touch history, notes, next steps, and inline editing, without leaving the row.

## Archive

Retire people without deleting history. Your list stays honest, not just long.
